

Press Release

Boulogne Billancourt, 9 January 2023

The VisionHM® patient pathway management software suite is available from the UGAP via its e-health market, held by CFI, Compagnie Française d'Informatique.

Since the epidemic crisis, the digital transformation of healthcare establishments has been accelerating at an unprecedented rate. The challenge of intelligent and efficient coordination of all resources (human and material) for comprehensive, structured and continuous patient care is central to improving the fluidity of organisations, for the benefit of healthcare professionals, hospital management and patients.

The VisionHM solution responds to this challenge by relying on a library of management, care and follow-up protocols that are easily adaptable.

VisionHM is interoperable according to the HL7 protocol with the other "business" applications of the hospital's information system, in particular the computerised patient file, the management of imaging appointments, the management of consultations and the management of the organisation of operating theatres.

Thanks to its City-Hospital platform, VisionHM also enables coordination with health professionals outside the establishments (GHT), for continuity in patient follow-up.

The VisionHM solution is already operational in France, Switzerland and Tunisia, in several reference establishments.

*As a partner of CFI, Telemedicine Technologies can now offer this service to **all health establishments via the UGAP, but also to GHTs to enable them to take a global approach.***

About Telemedicine Technologies

Telemedicine Technologies is a publisher of collaborative e-Health solutions, leader in the field of Clinical Research with its CleanWEB solution, a secure internet platform dedicated to the electronic management of clinical studies and registries. Telemedicine Technologies is also an actor involved in the evaluation of patient monitoring at home, with connected objects and in remote medicine with connected suitcases.

We have set up more than 5,000 studies, with investigator centres in 64 countries and more than 50,000 users worldwide.
