

## PRESS RELEASE

*Boulogne Billancourt – October 22, 2024*

### **Telemedicine Technologies wins BSMA Clinical Trials Supply Chain Award for groundbreaking CleanWeb™-RTSM module**

Telemedicine Technologies, a leader in eClinical solutions, is proud to announce that it has been awarded the prestigious **BSMA Clinical Trials Supply Chain Award** for its innovative **CleanWeb™-RTSM** module. This award recognizes Telemedicine Technologies' continued efforts in transforming the clinical trial landscape through integrated, cloud-based platforms that streamline supply chain management and involvement of all clinical trials stakeholders.

Telemedicine Technologies has been a pioneer in the development of eClinical software for nearly 25 years. The **CleanWeb™ eClinical Suite**, which includes modules such as eCRF, Randomization and Trial Supply Management (RTSM), and Data Visualization, offers a seamless and unified platform for all clinical trial stakeholders. Its latest **CleanWeb™-RTSM** module sets new standards for managing Investigational Medicinal Products (IMPs) and ancillary supplies in clinical trials.

The **CleanWeb™-RTSM** module enables centralized communication, real-time tracking, and enhanced regulatory compliance across all stakeholders, including sponsors, clinical sites, CROs, and

manufacturers. By ensuring accurate and transparent supply management, CleanWeb™-RTSM helps minimize the risk of shortages, miscommunication, and non-compliance, while automating key tasks such as randomization, inventory alerts, and reporting.

*"This award is a testament to our team's dedication to delivering cutting-edge solutions that enhance the efficiency and accuracy of clinical trials," said Yoanni Matsakis, President of Telemedicine Technologies, after the BSMA Conference award ceremony. "We are honored to be recognized for our work on CleanWeb™-RTSM, which reflects our commitment to providing advanced tools that address the complexities of clinical trial management."*

As a fully customizable **Software-as-a-Service (SaaS)** solution, CleanWeb™-RTSM can be tailored to meet the specific needs of biopharma companies, CROs, and manufacturers, providing a robust, audit-ready platform that enhances clinical trial outcomes.

Telemedicine Technologies will be hosting a free webinar on **December 3rd** to showcase the features and benefits of **CleanWeb™-RTSM**. For more details or to sign up, please [contact us](#) directly.

### **About Telemedicine Technologies**

Telemedicine Technologies is a leading provider of collaborative eHealth solutions, specializing in Clinical Research with its **CleanWeb™** solution, a secure web-based platform dedicated to the electronic management of clinical studies and registries.

CleanWeb™ has been implemented over **7,000 studies**, involving more than **20,000 investigator sites** across **64 countries**, with over **50,000 users worldwide**, serving more than **3 million patients** in our databases.

### **Available modules and services:**

- eCRF
- ePRO
- Designer
- CTMS
- eTMF and eISF
- Shared Agenda
- eConsent
